2021

BEYOND DISRUPTIVE INNOVATION

TECHHOUSE MOBILATHON

The TECHHOUSE MOBILATHON is a high-speed innovation challenge in the form of a hackathon, where participants from various academic backgrounds create new concepts, prototypes or tech solutions within 48 hours. Our corporate partners:

- > [4a technology](#),
- > [Energie Graz](#),
- > [Fill](#) and
- > [Hutchison Drei](#)

As participants we welcome students and young professionals from all backgrounds (e.g. informatics, business, engineering, machine learning, design, innovation, or whatever else your current focus is).

Participants can choose between working on either the **TECHNICAL CHALLENGE**, where we are looking to automate and optimize failure recognition through visual data analytics and machine learning, or our **BUSINESS MODEL CHALLENGE**, where we are looking for new concepts and business models in the field of e-mobility. More detailed information on our challenges will be published soon.

Both challenges will be accompanied by industry mentors from our corporate partners, as a well as experts from our academic partner network.

At the end of the hackathon, the teams will present their results in front of a jury of experts and will compete for a cash prize, as well as the chance to continue their work with one of our challenge partners.
